SCT & DMS Lab Tips and Techniques

Installing SCT

If you have issues installing SCT in your Windows RDP environment via the instructions provided, please feel free to download SCT using Chrome from https://aws.amazon.com/dms/schema-conversion-tool/ in your Windows RDP environment.

Oracle Driver Installation

If you installed SCT from the internet, you need to download the Oracle driver for SCT. Please perform the following tasks using your Chrome browser in your Windows RDP environment.

#1 – Access https://github.com/mavinson/DMS-Immersion-Day and save the ojdbc8.jar file in the Windows RDP environment

#2 - Launch AWS SCT

#3 - In AWS SCT, choose Global Settings from Settings.

#4 - In Global Settings, choose Driver, and then choose Browse for Oracle Driver Path. Locate the JDBC Oracle driver (ojdbc8.jar) and choose OK.

Saving Your Project

If you cannot save your project in SCT, please make sure the 'Projects' folder exists in 'C:\Users\Administrators\AWS Schema Conversion Tool' directory.
